

## SWAT version used in AGWA2

Posted by nalloysius - 2008/10/31 16:20

---

I assumed that AGWA2 for ArcGIS 9.2 uses swat2005, but when I checked in the models folder I found it to be swat2000.exe. Can I just replace that with swat2005.exe. Will it work or is there a different version of AGWA2 that supports swat2005.

Thanks,  
Noel

The most recent version (Build 20081020) of AGWA2 for all versions support SWAT2005, however you'll need to download the model and the SWAT 2005 DAT files by individually or download the whole AGWA2 package before using it.

Also please note that there is a bug when executing SWAT2005. The batch file that is written and called to run the model calls swat2005 when swat2003\_mod should be called instead. Until I put another update up (possibly next week), you'll have to work around the issue by editing the batch file yourself and replacing swat2005.exe with swat2003\_mod.exe.
